

Read like a...

MATHEMATICIAN

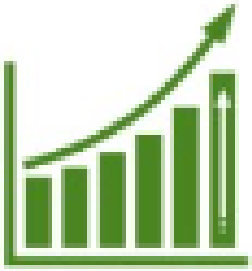

Look for key command words, symbols, units and values

What exactly are you being asked to do? What aspect of Maths do you need to apply? What values are you working with? What units are you working with?

Read text carefully and make links with things you already know

Have you done something like this before? Can you use a similar method?

Interpret data, graphs and charts carefully

What is the data showing? What can you see from the data? Are there any trends or anomalies?

Look again at your answer to check that it makes sense.

Does the answer you have make sense when you read it back? Are the units, decimals, values etc correct?

“Without mathematics, there’s nothing you can do. Everything around you is mathematics. Everything around you is numbers.” Shakuntala Devi
